SOLVENT BASED (NON - ACIDIC / ALKALI) PAINT REMOVER

Removal Procedure:

- Brush PAINT REMOVER in a quantity related to the thickness of the paint film that has to be removed.
- Wait between 5 minutes to 60 minutes depending on the paint & period of coating, but also remember to remove with a paint scraper or filling knife the softened paint before it dries.
- Repeat this process in case of a very thick (old) paint film until all coats are removed.
- After drying, sand the surface and remove the remainder of the PAINT REMOVER with a brush, thereafter flush with water.

Precautions:

- All the metal surface cleaned with paint remover should be cleaned with Thinner before recoating as to avoid adhesion problems of the new paint.
- This Paint remover should not be used for removal of waterbase wall paints or on walls as it will not work effectively.
- Do not shake the tin. Puncture the lid before unscrewing, with a small nail wrapped in cloth to release the pressure. Try to avoid contact with skin, the softener in the PAINT REMOVER can burn the skin and is very volatile and dangerous if splashed onto skin, eye etc.
- If material has been in contact with the skin, flush with plenty of water and seek medical advice as soon as possible. This product should be used in well-ventilated areas. Although this product is non-flammable smoking is prohibited during application and for a short time afterwards.

Physiological Hazards:

PAINT REMOVER does not contain dangerous solvents, nevertheless, good ventilation in working rooms is recommended as well as the use of safety tools and equipment. PAINT REMOVER is flammable and harmful if swallowed. If contact with eyes or skin occurs, wash well with fresh water and seek immediate medical advice.
